A BUDGETING APP FOR ADULTS WITH ADHD

Patiencents

Patience pays.

The budgeting app that turns patience into the things you want.

You’ve downloaded a budgeting app before.

Where is it now?

For a lot of adults with ADHD, it’s deleted, forgotten, or still quietly charging a subscription.

THE PROBLEM

Money costs more with ADHD

15.5M

U.S. adults with an ADHD diagnosis in 2023, half diagnosed as adults

Late fees

Adults with ADHD are more likely to pay late fees and overdraw accounts

34.2%

of people who don’t budget say it’s too time-consuming

Shame

Guilt after spending can trigger even more emotional spending

Sources: CDC MMWR (2024); The Ohio State University research; Debt.com budgeting survey (2026)

THE INSIGHT

Every budgeting app breaks at the same moment

Discovery	Setup	Week 1	Weeks 2–3	The lapse	The return
Hopeful: “This one gets me”	An evening of categories	Proud and engaged	“I’ll catch up this weekend”	A busy week; avoids the app	A backlog in red: “I failed again”
Low risk	Medium risk	Low risk	High risk	Critical	Critical

One missed week becomes a backlog, and the backlog becomes shame.
Patiencents is designed for that moment.

OUR NEW APPROACH

The app does the budgeting. You just stay patient.

1

Connect

Link your bank once. Patiencents reads your transactions for you.

2

Organize

Purchases sort into Bills, Essentials, and **Usuals**: the things you usually buy, like takeout and games.

3

Today's Budget

Bills and essentials are set aside first. What's left becomes a daily amount for Usuals that updates on its own.

4

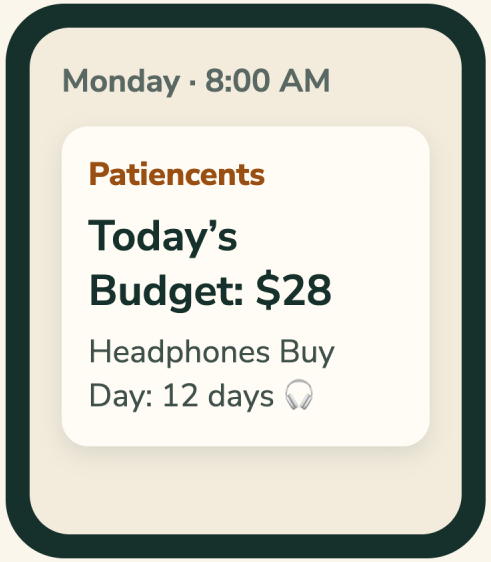

Stay patient

What you don't spend fills your Patience Pot and brings your next Buy Day closer.

You see one number. Patiencents handles the rest.

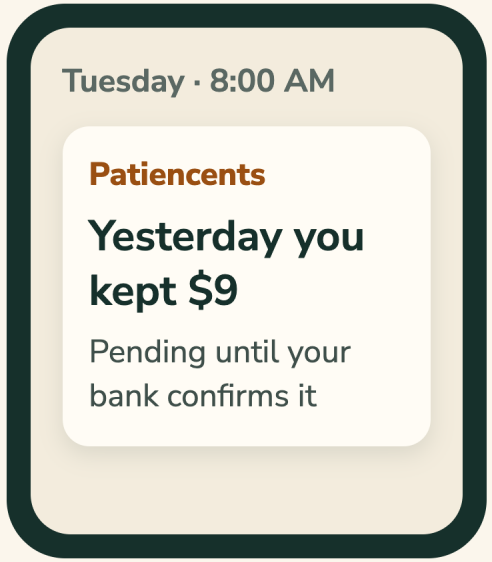

THE EXPERIENCE

A week with Patiencents

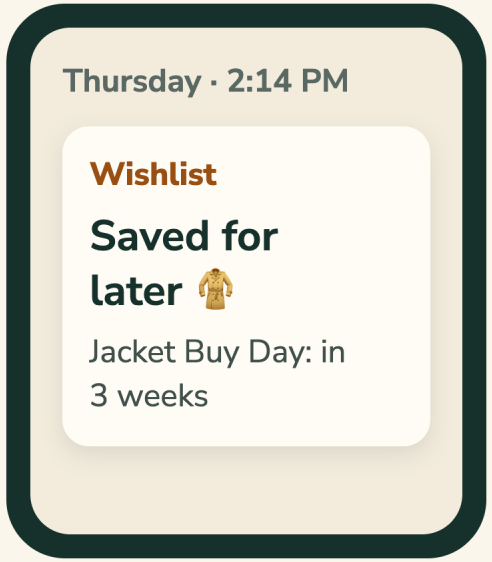

Monday morning

The number comes to Jordan. Nothing to remember.

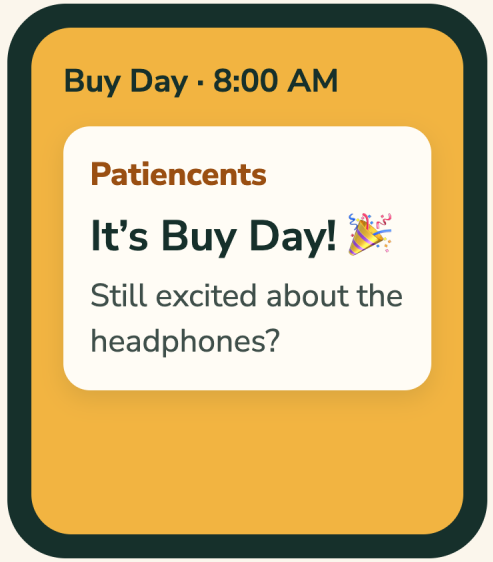

The next day

Jordan spent $19 of $28. The other $9 heads to the Pot.

A new temptation

Not no, just later. The jacket goes on the wishlist.

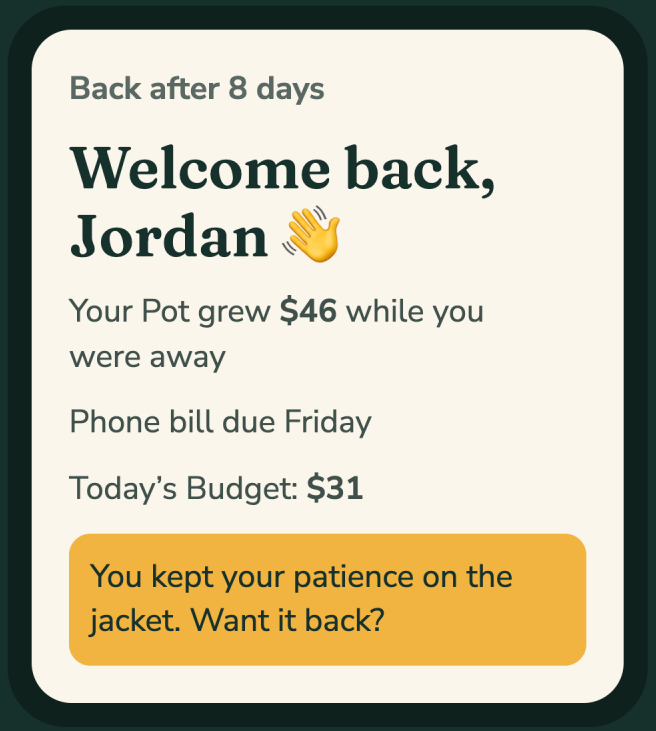

Buy Day

Jordan buys them on purpose, and the bank match confirms it.

THE SAFETY NET

When life gets in the way, nothing piles up

No backlog

Spending sorts itself while you're away

Missed Buy Days are wins

They become "Kept your patience"

No red, no streaks

Overspending never touches the Pot

HOW WE DESIGN

Six promises to every user

01

Not no, just later

Wants are planned, never denied

02

Every number is real

Rewards are confirmed by bank data, never self-reported

03

The app comes to you

A morning notification, so there's nothing to remember

04

No backlog, ever

Time away never piles up into a to-do list

05

No streaks, no losses

Total Kept only ever goes up

06

Two minutes a day

Any feature that asks for more has to earn it

BUILT FOR ADHD BRAINS

Every feature answers an ADHD challenge

ADHD challenge	What Patiencents does
Time blindness	A daily number and real dates instead of monthly totals
Out of sight, out of mind	The number and countdown arrive every morning
Impulsivity	New wants wait on the wishlist for their Buy Day
Craving quick rewards	Every confirmed dollar in the Pot is a visible win
Overwhelm	Spending sorts itself into Bills, Essentials, and Usuals
Shame and avoidance	Missed Buy Days become “Kept your patience”

THE OPPORTUNITY

Two growing markets, one open overlap

3.4–6M

U.S. adults with ADHD who use or want to try a budgeting app: our serviceable market

$1.9B

ADHD apps market in 2025, growing 17.5% a year

$1.89B

Personal finance software market in 2025, growing 10.8% a year

Patiencents sits in the overlap, where no one leads yet.

Sources: CDC MMWR (2024); Debt.com budgeting survey (2026); Grand View Research; Reportprime

THE COMPETITION

No one links patience to future wants

Feature	Patiencents	YNAB	PocketGuard	Rule	Inflow
Daily spending number	Yes	No	No	No	No
Wishlist with automatic Buy Days	Yes	No	No	No	No
Bank-confirmed reward for restraint	Yes	No	No	Yes	No
Shame-free restart	Yes	No	No	Yes	Yes
Low-effort daily use	Yes	No	Yes	Yes	Yes
Automatic bank sync	Yes	Yes	Yes	Yes	No

Public product information, October 2026. Rule is UK-based; Inflow has no money tools.

MVP #1

What our first release will prove

OUR RISKIEST ASSUMPTION

If daily patience visibly funds the things people want, and lapses never create a backlog, adults with ADHD will plan purchases instead of buying on impulse.

Wishlist adoption

Do users plan wants instead of buying them?

Buy Day outcomes

Bought on purpose or kept patience, versus bought early

Patience Pot growth

Real, bank-confirmed savings per user each week

Comeback rate

Users away 7+ days who return

90-day retention

Still using it long after other apps were deleted

HOW IT'S BUILT

Three tiers, secure from day one

Presentation · Vercel

The app

A mobile web app people add to their home screen

Application · Vercel

The logic

Today's Budget, Buy Days, matching, notifications

Data · Supabase

The records

Accounts, transactions, and the Pot ledger

- Users see only their own data
- Bank login through Plaid
- Encrypted bank tokens
- Users can't edit their Pot
- Code reviewed in GitHub

MVP technology cost: about $0 on free tiers.

WHAT'S NEXT

From beta to launch, guided by evidence

NOW

MVP #1 beta

22 features · 140 tasks

A free beta for chronic app abandoners and newly diagnosed adults, built in five phases

THEN

Decision gates

Results decide

Retention, comeback rate, wishlist adoption, and Buy Day outcomes shape the next release

LAUNCH

MMP

Public and paid

Support partners, ADHD money lessons, and a promise: we'll remind you before we ever charge you

Patience pays.

Let’s build the budgeting app that finally works with ADHD brains.

Next: 5–8 interviews with adults with ADHD, then our first beta testers.
