A BUDGETING APP FOR ADULTS WITH ADHD

Patiencents

Patience pays.

The budgeting app that turns patience into the things you want.

THE PROBLEM

You've downloaded a budgeting app before. Money just costs more with ADHD.

15.5M

U.S. adults with an ADHD diagnosis in 2023, half diagnosed as adults

Impulse

Adults with ADHD report more impulse buying and spending they regret

34.2%

of people who don't budget say it's too time-consuming

Shame

Guilt after spending can trigger even more emotional spending

Sources: CDC MMWR (2024); The Ohio State University research; Debt.com budgeting survey (2026)

THE INSIGHT

Every budgeting app breaks at the same moment

Discovery	Setup	Week 1	Weeks 2–3	The lapse	The return
Hopeful: “This one gets me”	An evening of categories	Proud and engaged	“I’ll catch up this weekend”	A busy week; avoids the app	A backlog in red: “I failed again”
Low risk	Medium risk	Low risk	High risk	Critical	Critical

One missed week becomes a backlog, and the backlog becomes shame.
Patiencents is designed for that moment.

OUR NEW APPROACH

The app does the budgeting. You just stay patient.

1

Connect

Link your bank once. Patiencents reads your transactions for you.

2

Organize

Purchases sort into Bills, Essentials, and **the Usuals**: the things you usually buy, like takeout and games.

3

Today's Budget

Bills and essentials are set aside first. What's left becomes a daily amount for the Usuals that updates on its own.

4

Stay patient

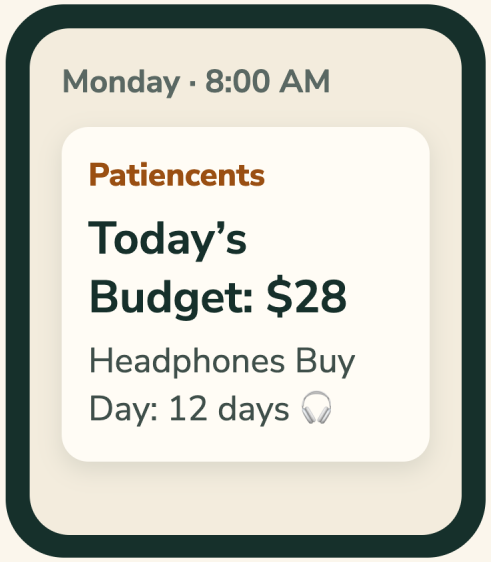

What you don't spend fills your Patience Pot and brings your next Buy Day closer.

🔔 **Two gentle notifications a day** carry the whole thing: your budget in the morning, and a tap-to-learn breakdown in the afternoon.

You see one number. Patiencents handles the rest.

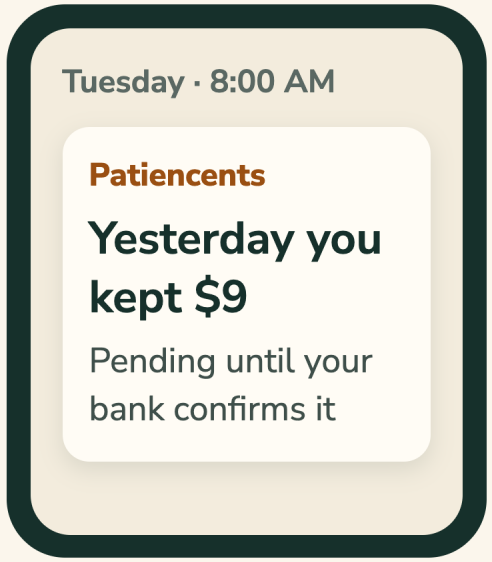

THE EXPERIENCE

A week with Patiencents

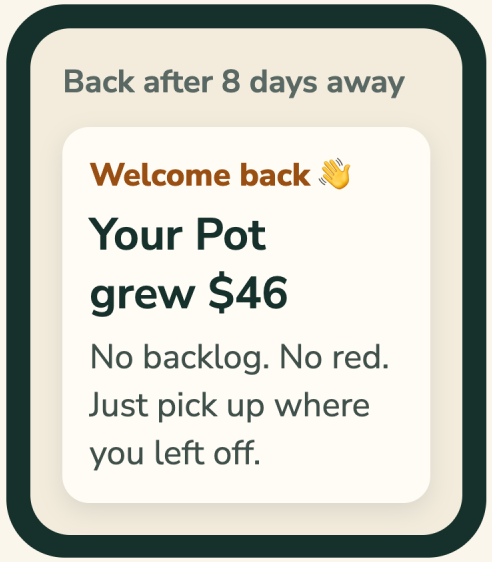

Monday morning

The number comes to Jordan. Nothing to remember.

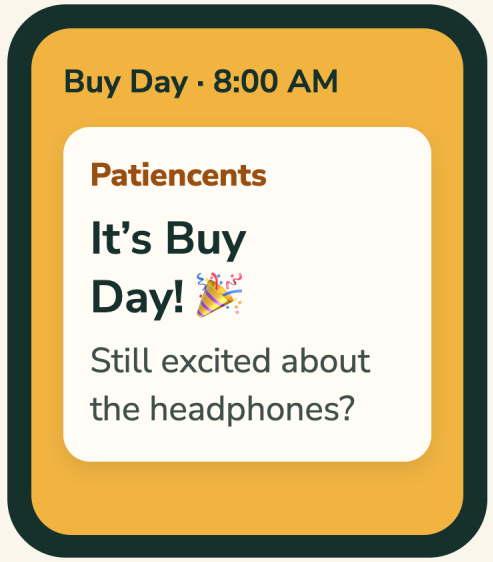

The next day

Jordan spent $19 of $28. The other $9 heads to the Pot.

Life gets in the way

A week away, and nothing piles up. Coming back takes 10 seconds.

Buy Day

Jordan buys them on purpose, and the bank match confirms it.

BUILT FOR ADHD BRAINS

Every feature answers an ADHD challenge

ADHD challenge	What Patiencents does
⏳ Time blindness	A daily number and real dates instead of monthly totals
🙈 Out of sight, out of mind	Two gentle notifications a day bring the app to you
⚡ Impulsivity	New wants wait on the wishlist for their Buy Day
🎉 Craving quick rewards	Every confirmed dollar in the Pot is a visible win
🔢 Abstract numbers	A breakdown shows how your spending shaped today's budget
🌊 Overwhelm	Spending sorts itself into Bills, Essentials, and the Usuals
💛 Shame and avoidance	Missed Buy Days become "Kept your patience"

THE OPPORTUNITY

Two growing markets, one open overlap

3.4–6M

U.S. adults with ADHD who use or want to try a budgeting app: our serviceable market

$1.9B

ADHD apps market in 2025, growing 17.5% a year

$1.89B

Personal finance software market in 2025, growing 10.8% a year

Patiencents sits in the overlap, where no one leads yet.

Sources: CDC MMWR (2024); Debt.com budgeting survey (2026); Grand View Research; Reportprime

THE COMPETITION

No one links patience to future wants

Feature	Patiencents	YNAB	PocketGuard	Rule	Inflow
Daily spending number	✓	✗	✗	✗	✗
Wishlist with automatic Buy Days	✓	✗	✗	✗	✗
Bank-confirmed reward for restraint	✓	✗	✗	✓	✗
Shame-free restart	✓	✗	✗	✓	✓
Low-effort daily use	✓	✗	✓	✓	✓
Automatic bank sync	✓	✓	✓	✓	✗

Public product information, October 2026. Rule is UK-based; Inflow has no money tools.

MVP #1 · WHAT IT WILL PROVE

Our riskiest assumption: if patience visibly funds what people want, and lapses never pile up, adults with ADHD will plan purchases instead of buying on impulse.

Wishlist adoption and Buy Day outcomes

Do users plan wants, and buy on purpose instead of on impulse?

Patience Pot growth

Real, bank-confirmed savings per user each week

Comeback rate and 90-day retention

Do people return after a lapse, and stay long after other apps were deleted?

Notifications kept on

The engagement model: do users keep and tap them?

NOW

Free native beta via TestFlight: 22 features, 151 tasks

LAUNCH

App stores, subscriptions, support partners

HOW IT'S BUILT

Three tiers, secure from day one

The App · React Native
Native app
One app for iPhone and Android, with reliable push notifications from install

⬇

Backend · Vercel
The logic
Today's Budget, Buy Days, matching purchases, and sending notifications

⬇

Data · Supabase
The records
Accounts, transactions, and the Patience Pot ledger

Users see only their own data
Bank login through Plaid
Code reviewed in GitHub
Encrypted bank tokens
Push via Apple + Google
Users can't edit their Pot

Patience pays.

Let’s build the budgeting app that finally works with ADHD brains.

Next: 5–8 interviews with adults with ADHD, then our first beta testers.
